

AIA HSW/SD Certified Sustainable Metal Roofing

Seminar description:

This seminar is approved by the American Institute of Architects for Health/Safety/Welfare and Sustainable Design credit. Berridge Manufacturing Company has been an AIA HSW Passport provider of 1-hour generic metal roofing seminars since 1998. Berridge has been presenting this seminar to AIA, CSI and RCI local and regional chapters and conferences, as well as individual and multi-office seminars around the country for more than fifteen years.

We constantly update sustainable design information as it relates to metal roofing and as the importance of the subject continues to grow with architects. Several LEED credits on various aspects of metal roofing are available and described during the show. More than 60% of Energy Star-labeled roofing products are metal roof and coatings designed for metal roofing. This makes metal roofing an important seminar topic.

The seminar teaches the keys to Green, watertight metal roofing and consists of a digital PowerPoint presentation of metal roofing products, details, specifications and examples of installations. To end the seminar product samples are passed around for hands on review and questions are taken. A BMC Portable Roll former can be demonstrated in a parking area adjacent to the meeting room to conclude the program.

Learning objectives:

- 1. Understanding Green Initiatives & Standards as Related to Sheet Metal Roofing***
- 2. Energy System Integration & Sustainable Design Options for Metal Roofing***
- 3. Building With Metal: Materials, Finishes, Products & Benefits of Jobsite Roll Forming***
- 4. Designing With Metal: Warranties & Best Practices***
- 5. Attention to Details: Common Roof Details***
